

Introduction to the Course

Introduction

Open Research in the Digital Humanities

Dr Nadezhda Povroznik
Research Associate, Humanities Data Science and Methodology (HDSM)
Institute of History, Technical University of Darmstadt

**Dieses Projekt wurde durch das BMFTR-Verbundprojekt HERMES gefördert.*

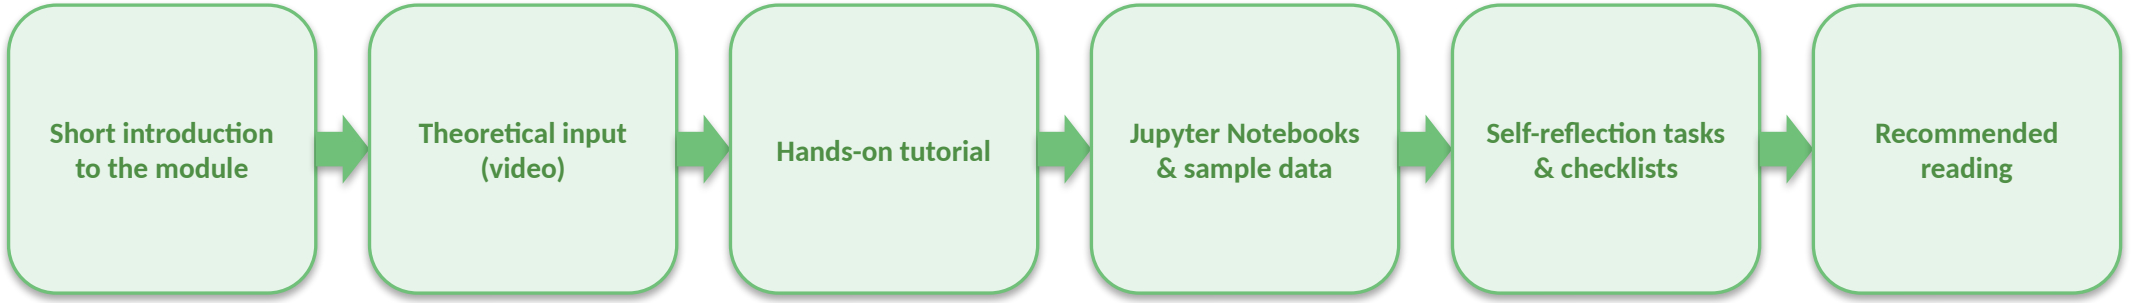

The Course Is Divided into Eight Modules

- **Module 1 —** introduces Open Humanities and helps to distinguish this field from broader approaches to open science and research.
- **Module 2 —** focuses on documentation as a systemic practice.
- **Module 3 —** explores open cultural-heritage data that can be used to address various research questions.
- **Module 4 —** examines how to document the use of artificial intelligence in research.
- **Module 5 —** takes you through data preparation, analysis, visualisations, and documenting the cycle of Digital Humanities research.
- **Module 6 —** is optional; it introduces data enhancement through external data sources such as Wikidata.
- **Module 7 —** focuses on reproducibility: you audit your workflow using dedicated tools and improve your documentation accordingly.
- **Module 8 —** prepares you for responsible publishing, including what you can publish openly and whether there are any restrictions.

The modules guide you through the main stages of open Digital Humanities research. We recommend following them in order, but you can also use individual modules when you need support at a particular stage of your project.

How the Course Works

Each module combines several elements:

The course is based on the concept of learning by doing.

Beginners can work with the prepared datasets and the code included in the course. More experienced learners can follow the course path using their own datasets.

By the End of the Course, You Will Be Able To

- Explain the main principles of open research in the humanities.
- Find, build and document datasets.
- Develop and document a research workflow, code and tools.
- Check and improve the transparency, reproducibility and reusability of your work.
- Make informed decisions about how your research materials can be shared or responsibly restricted.

You do not need to have all the answers at the beginning. Open research is implemented through practice, reflection, revision and documentation.
